When we consider the outlook for infrastructure, we see a toast to the future, a toast to the past and a toast to investors far and near. In this new year, we find that global listed infrastructure offers multiple benefits for investors:

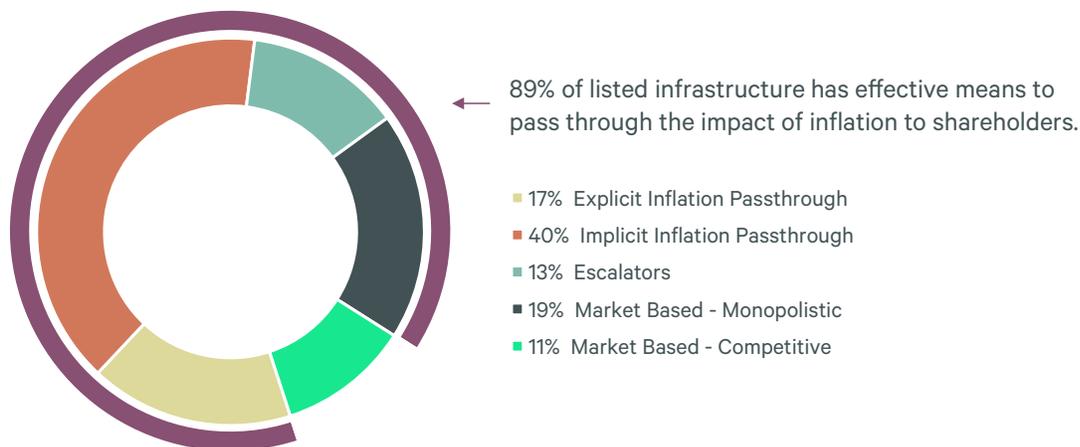

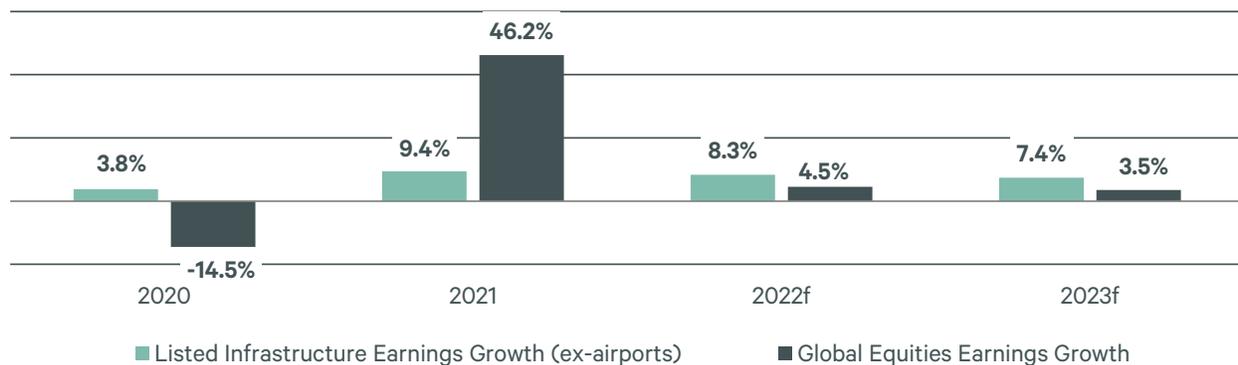

- Differentiated and consistent earnings that can outperform amidst persistent inflation.
- Resilient performance during periods of contracting and moderating growth, during which the asset class has historically seen relative multiple expansion.
- Accelerating investment growth driven by secular themes of energy security, decarbonization and digitalization.
- Upside potential into the final stages of the Federal Reserve rate hike cycle.

The 2023 opportunity in infrastructure

Resilient against slowing growth and inflationary pressures

As we look into 2023, the primary concern for equity investors remains slowing growth as central bankers tighten monetary policy to combat stubborn inflation. Considering this, infrastructure stands well-positioned. In 2023, we expect resilient infrastructure earnings to outpace global equities, while still-sticky inflation (even after a likely 2022 peak) should lend support to an asset class in which ~90% of constituents pass inflation on to end-users.

Figure 1: Infrastructure offers differentiated growth and inflation protected cash flows

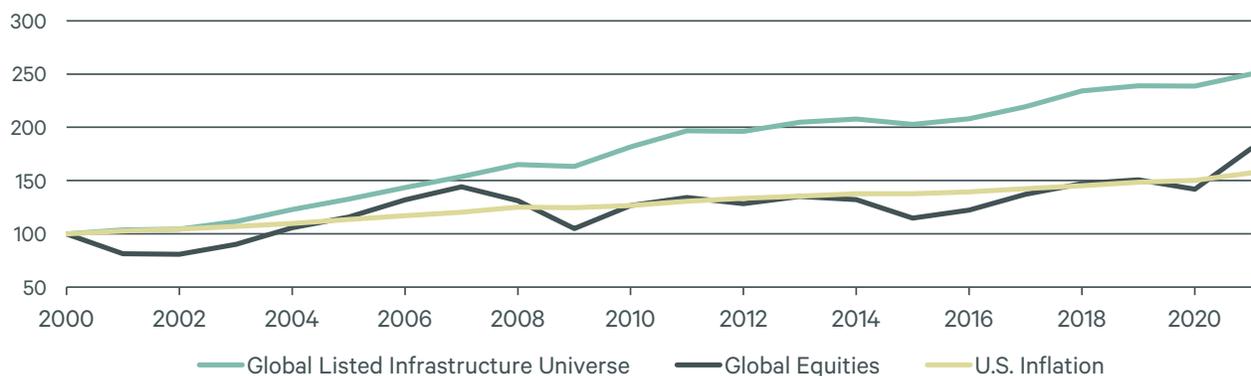

Source: CBRE Investment Management, FTSE Global Core Infrastructure 50/50 Index and MSCI ACWI ETF (FactSet); as of 11/30/2022. "f" refers to "forecasts". EPS growth excludes airports due to the underlying volatility of traffic estimates post 2019. EPS estimates can be affected by assumptions concerning revenue growth, operating margins, interest rates, and tax rate assumptions. Actual results, performance or events may differ materially from those expressed or implied in such statements. There is no guarantee that the investment objective will be attained and there is no guarantee that risk can be managed successfully; results will vary. Past performance is no guarantee of future results.

The prospects for global equity earnings are highly uncertain. Currently, consensus expects only 3.6% growth in 2023, a moderation from February expectations of 8.6%. With each passing earnings season, the pincers of higher inflation (on costs) and slowing consumer demand (on revenues) squeeze the margins of general equities. By contrast, infrastructure earnings are built upon a bedrock of contracted, regulated and inflation protected returns; a utility or transport company can earn from an asset for decades, while customer tariffs can rise with inflation. On top of this bedrock, infrastructure earnings are growing due to a combination of countercyclical and secular investments. Global utilities are racing to install hundreds of gigawatts of wind and solar power while regulated grids upgrade systems to prepare for that capacity. Cell towers and data centers continue to robustly grow in the service of data demand that will likely quintuple over the next several years, while transports and midstream infrastructure reprice tariffs with inflation and drive our energy security. Infrastructure’s 2023 combination, of resiliency and differentiated growth, is why we expect cash flows to continue their long-term track record and outperform in this new year.

With each earnings season, the pincers of higher inflation and slowing demand are squeezing general equities.

Infrastructure earnings are highly certain, inflation-protected and growing.

For comparison purposes, company operating earnings and the U.S. Consumer Price Index values were rebased to 100 on 12/31/2000. Yields fluctuate and are not guaranteed. Past performance is no guarantee of future results.

The potential for relative multiple expansion

Even with outperformance on a year-to-date basis, infrastructure has lagged broad equities over the last five years. It remains at a compelling valuation level considering the outlook of the world economy. Compared to broad equities, infrastructure assets typically fetch a premium, one which expands during periods of moderating or contracting economic growth. We would emphasize, as seen below, that in an environment of contracting economic growth infrastructure has demonstrated the potential for its relative valuation multiple to more than double from current levels.

Figure 3: In a contracting economy, infrastructure’s premium has more than doubled from current levels

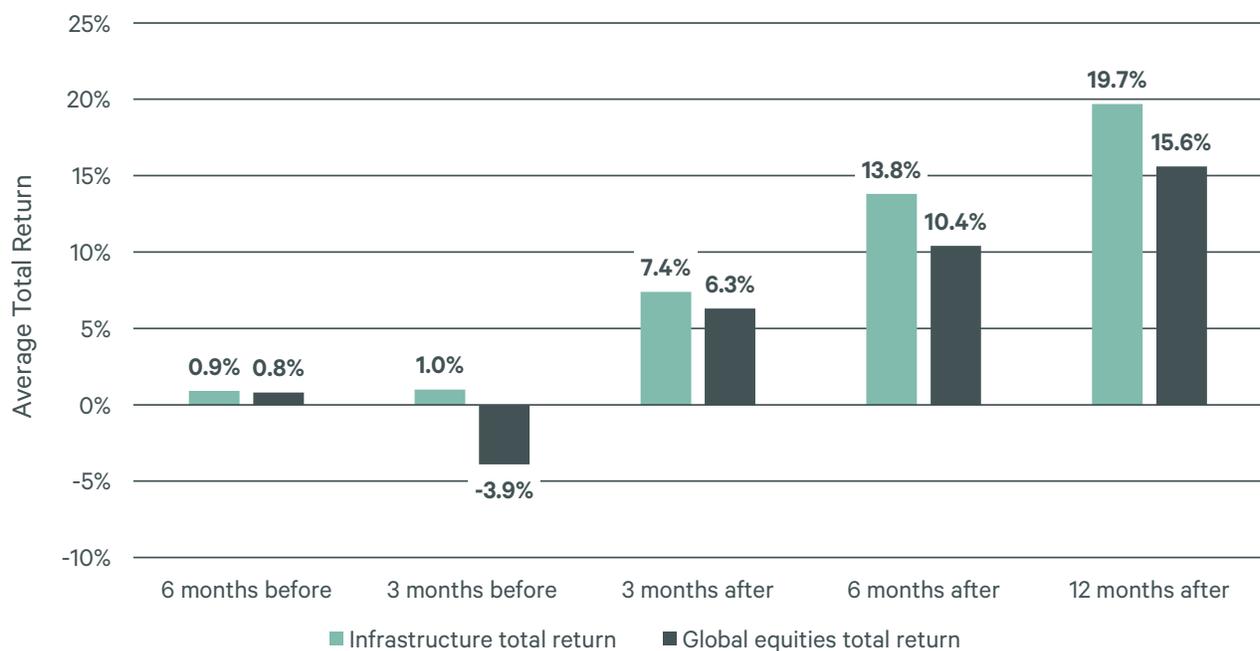

Source: CBRE Investment Management, iShares MSCI ACWI ETF, SPDR S&P Global Infrastructure ETF, ProShares Dow Jones Brookfield Global Infrastructure ETF, as of 11/30/2022. Considers relative valuations between infrastructure and the MSCI World during Moderating, Contracting, Recovering, and Expanding phases of the economic as calculated by the US Economic Cycle Indicator, which is calculated using the year-on-year change in the Conference Board’s Leading Economic Index (LEI), normalizing its history using a z-score, and tracking the 3-month moving average of that z-score. The Economic Cycle is determined by both the level and the change in the indicator, requiring two months in the same cycle in order to confirm a new cycle.

An opportune moment considering interest rates

Often, investors worry about the effect of higher rates on a yield-oriented asset such as infrastructure. This year’s performance belies such fears as infrastructure’s 2022 outperformance has come amidst one of the fastest-paced hiking cycles in the last forty years. Data over the long-term should further dispel rate-driven concerns as historically infrastructure has presented just a ~0.3 correlation to bonds and outperformed them by ~700bps annually.

When we consider the likely path and pace of future central bank hikes, particularly those by the U.S. Federal Reserve, we see further reason for investors to allocate to infrastructure. Simply put, investors don’t need to wait for the end of a hiking cycle to consider the asset class. As we show below, infrastructure outperformance compared to global equities has historically accelerated 3-6months before the final hike in a hiking cycle. As a result, if investors believe that the Fed is likely to slow and pause in spring 2023 or earlier, amidst a potentially deteriorating economy, history suggests that the moment to buy infrastructure is today.

Figure 4: Infrastructure outperformance accelerates 3-6months before a final Fed hike

Source: CBRE Investment Management, Datastream. Considers the performance of listed infrastructure before and after the closest monthly end dates to the final Fed hikes in 1995, 2000, 2006, and 2018. For the 2000, 2006, and 2018 cycles, listed infrastructure is represented by the UBS Global Infrastructure & Utilities 50/50 Index linked as of March 1, 2015 to the FTSE Global Core Infrastructure 50/50 Index. For the 1995 cycle analysis, infrastructure prior to 12/31/1994 is represented by a 50/30/20 blend of the Datastream utility, pipeline, and rail indices. Global equities are represented by the MSCI World Index.

A comprehensive view of the infrastructure investment opportunity

When summarizing the 2023 outlook, we see the present moment as presenting several of the factors conducive to infrastructure outperformance.

- Infrastructure's relative earnings momentum to broad equities is improving; the asset class is accelerating secular investment while global equities face significant margin pressure.
- Inflation remains persistent, a boon to the revenues of an asset class with a history of inflation protection and price inelastic demand.
- Relative valuation is compelling: while above historical averages, relative premiums have more than doubled from current levels during prior periods of contracting economic growth.
- Against this backdrop, the prospects for fundamental investment continue to rise, driven by the secular investments in projects related to decarbonization, digitization and energy security.

As an added bonus, the prospects for active management of the infrastructure asset class are bright. Infrastructure is a niche asset class that is both underfollowed and under-owned by generalists, while listed assets are informed by a vast private market that managers with integrated public-private research platforms can research to drive alpha. Over the last decade, active managers such as CBRE Investment Management have outperformed major benchmarks and peers with in-line to lower levels of volatility. As we eclipse this last year and look to those ahead, we are excited to report future results.

About CBRE Investment Management

CBRE Investment Management is a leading global real assets investment management firm with \$14.3.9 billion in assets under management* as of September 30, 2022, operating in more than 30 offices and 20 countries around the world. Through its investor-operator culture, the firm seeks to deliver sustainable investment solutions across real assets categories, geographies, risk profiles and execution formats so that its clients, people and communities thrive.

CBRE Investment Management is an independently operated affiliate of CBRE Group, Inc. (NYSE:CBRE), the world's largest commercial real estate services and investment firm (based on 2021 revenue). CBRE has more than 105,000 employees (excluding Turner & Townsend employees) serving clients in more than 100 countries. CBRE Investment Management harnesses CBRE's data and market insights, investment sourcing and other resources for the benefit of its clients. For more information, please visit www.cbreim.com.
